1509:03 1501: 9-3-07(D) Exceeding maximum allowable injection pressure

NOV Requirements: Inspection requires action

I found the injection well not in operation during my inspection. I observed PAC Development's pressure gauge on the injection line after the injection pump reading 1,140 psi, which was over the Maximum Allowable Pressure of 1,070 psi. Upon further inspection of the Murphy Switch, I observed the Murphy Switch set a 1,140 psi, which was above the Maximum Allowable Pressure of 1,070 psi. The ball valve on the injection line after the injection pump was in the open position. I told the facility operator that the injection well was to be shut down. I called PAC Development and left a message for a return call. Afterwards, I received a call from Justin Inspection.CMMNT:

Caldwell from PAC Development. I informed Mr. Caldwell about my findings.

I told Mr. Caldwell:

The injection pump was to remain shut down to allow the pressure to drop below the Maximum Allowable Pressure and a follow-up inspection must be performed.

The Murphy Switch was to be set at or below the Maximum Allowable Pressure.

A Compliance Notice has been issued. Photos were taken and are available upon request.
