**1509:03 1501: 9-3-07(D) Exceeding maximum allowable injection pressure**

NOV Requirements: Inspection requires action

I found the injection well not in operation; however, upon gauging the well I got a reading above the maximum allowable pressure of 1,080 psi. There was a facility operator on location. I instructed the facility operator not to operate the injection well until the pressure drops below the maximum allowable pressure. According to the facility operator, PAC is considering performing maintenance on the well in the near future. I observed no leaks or spills. A follow-up inspection will be conducted by March 18, 2019.
